

Coding Standards 2026

Engineering · classification: Internal

Coding Standards 2026 (Tech)

===== Code is typed, linted and covered: static analysis gates in CI, tests required for behaviour changes, and review by a second engineer before merge. Public functions carry docstrings; error paths return typed errors rather than leaking traces. Secrets never enter source control; configuration is injected. The standards document is versioned - this is the 2026 revision and supersedes prior copies.
