

Laptop Allocation and Return

IT · classification: Internal

Laptop Allocation and Return (IT)

===== Each employee receives one standard laptop; a second device requires department-head approval. Laptops are issued with full-disk encryption and managed endpoint protection enabled; disabling either is a policy violation. On exit, devices are returned to IT on or before the last working day and the full-and-final sign-off is blocked until the asset scan confirms return. Personal software may not be installed outside the approved catalogue.
