

Password and MFA Policy

IT · classification: Internal

Password and MFA Policy (IT)

===== Passwords are unique per system, at least twelve characters, and never reused across work and personal accounts. Multi-factor authentication is mandatory for VPN, email, cloud consoles and any administrative surface. Password managers approved by IT are the only sanctioned storage. Credentials are never shared, never written down, and never typed into pages reached from unsolicited links. Suspected compromise: rotate immediately and report within one hour.
