IT Asset Policy (IT)

===== Every hardware and software asset is registered in the asset inventory before it is issued. Assets carry an owner, a cost centre and a lifecycle state (requested, issued, in-repair, returned, retired). Annual asset audits reconcile the inventory against physical holdings; unregistered devices found on premises are quarantined by IT until ownership is confirmed. Employees must not move company assets between locations without updating the inventory record. Loss or theft must be reported to IT within 24 hours so remote-wipe can be issued.
